Education

Queen Mary University of London, London, UK PhD in Finance (Fully Funded PhD Scholarship)	2021–2026 expected
Queen Mary University of London, London, UK MRes in Economics and Finance	2020–2021
University of Arizona, Tucson, US MSc in Finance (with Honours)	2014–2015
University of Nebraska–Lincoln, Lincoln, US B.S.B.A. in Finance (Dean's List; Beta Gamma Sigma)	2011–2014

Research Interests

Sustainable Finance, Climate Finance, Corporate Finance, Digital Innovation/Fintech, ESG, Green Innovation

Research Papers

Job Market Paper

- ***Digital Innovation Amplifies Sustainability: Intangible Asset Synergies and Firm Performance***

This paper examines whether digital innovation improves the financial value of corporate sustainability. Using U.S.-listed firms between 2002 and 2022, I construct a patent-based measure of digital innovation from USPTO data and Cooperative Patent Classification codes. The results indicate that investments in sustainability yield greater profitability and valuation enhancements when combined with high-quality digital innovation, aligning with the Productivity J-Curve framework. Causal evidence derived from a Propensity Score Matching - Difference-in-Differences (PSM-DID) approach, using California's Global Warming Solutions Act, supports the view that regulatory pressure expedites the synergy between sustainability and digital innovation, with valuation benefits manifesting with a temporal lag.

Working Papers

- ***The Price of Green: Policy-Induced Climate Salience and Corporate Trade-Offs***

This paper studies how climate policy salience affects firms' environmental performance, innovation strategy, and valuation. Using the 2009 Regional Greenhouse Gas Initiative as a quasi-natural experiment, I apply PSM-DID design to U.S. public firms from 2006 to 2013. The results show that treated firms improve environmental performance and increase green patenting, but reduce general R&D, suggesting that climate regulation reallocates resources toward visible compliance-oriented innovation. The paper contributes to climate finance by showing that environmental regulation can stimulate targeted green innovation while crowding out broader technological exploration, especially among financially constrained firms and power-sector firms.

- ***Climate Risk, Tone, and Salience: Corporate Investment and Green Innovation***

This paper examines how the informational environment shapes firms' responses to climate risk. Using a quarterly panel of U.S. public firms from 2002 to 2017, I combine climate exposure and sentiment measures from earnings calls with news-based salience shocks and green patent outcomes. The results show that transition-risk exposure is associated with lower green innovation, consistent with a real-options delay mechanism, while supportive climate tone mitigates this effect. A Bartik-style salience design suggests that aggregate climate attention can initially affect investment and R&D but later delay irreversible green innovation.

Presentations

- Academy of Sustainable Finance, Accounting, Accountability & Governance (ASFAAG) Conference 2026
- 6th Finance and Accounting Annual Symposium 2026
- Alliance for Research on Corporate Sustainability (ARCS) 18th Annual Research Conference 2026
- 3rd Workshop on Recent Trends and New Developments in Sustainable, Green and International Finance 2026
- Finance and Accounting 2026 Annual Research Symposium 2026
- 16th Biennial APF International Conference on Macroeconomics and Finance 2026
- The International Finance and Banking Society (IFABS) 2026 London Conference 2026
- World Finance Conference 2026
- International Conference in Banking and Financial Studies (ICBFS) 2025
- QMUL Internal Seminar 2025

Teaching Experience

Queen Mary University of London

- **Principal Teaching Assistant:** Principles of Trading; Finance of Emerging Markets; International Financial Strategy
- **Teaching Assistant:** Principles of Finance; Economics and Finance in Action; Statistical Methods in Economics; Foundations of Finance

Service

- Organiser, 6th Annual PhD Workshop, School of Economics and Finance, Queen Mary University of London (2024)

Awards and Scholarships

- Fully Funded PhD Scholarship, Queen Mary University of London
- Honour Society membership
- University of Arizona Scholarship
- Benjamin F. Marshall Memorial Scholarship
- Dean's List
- Beta Gamma Sigma member

Additional Information

Computer Skills: Stata, R, Python, LaTeX

Professional: CFA Level II Candidate

Languages: English (Fluent), Chinese (Native)

Professional Experience

Industrial Bank Co., Ltd., Xi'an, China

2016–2019

Wealth Manager / Customer Manager
